## IN THE CLAIMS

- 1. (Original) Method to create a topology map indicating the quality of connectivity of each network device of a wireless network with all other network devices in said wireless network, characterized by the following steps:
- performing a measurement phase in which a calibration signal is successively broadcasted by each network device and in which all respective other network devices receiving said calibration signal measure the received signal quality;
- performing a reporting phase in which the measurement results are transmitted from each network device to the network device creating said topology map; and
- performing a creating phase in which said topology map of the network is created within the network device creating said topology map on basis of all received measurement results.
- 2. (Original) Method according to claim 1, characterized in that said calibration signal is transmitted in a dedicated control channel.
- 3. (Previously Presented) Method according to claim 1, characterized in that said measurement results are reported in a respective dedicated control channel.
- 4. (Previously Presented) Method according to claim 1, characterized in that said calibration signal is transmitted with the maximum allowed transmit power level.

- 5. (Previously Presented) Method according to claim 1, characterized in that said topology map is updated when a new network device joins the network.
- 6. (Previously Presented) Method according to claim 1, characterized in that said topology map is updated after a predetermined amount of time.
- 7. (Previously Presented) Method according to claim 1, characterized in that said topology map is stored in the central controller.
- 8. (Previously Presented) Method according to claim 1, characterized in that said topology map is broadcasted in the whole network.
- 9. (Previously Presented) Method according to claim 1, characterized in that only the parts of the topology map related to a specific network device are transmitted to said specific network device.
- 10. (Previously Presented) Method according to claim 1, characterized in that said calibration signal is transmitted using an omni-directional antenna.
- 11. (Previously Presented) Method according to claim 1, characterized in that the contents of the topology map are codes that are mapped to receive power values.

3 00172709

- 12. (Previously Presented) Method according to claim 1, characterized in that said measurement phase and/or reporting phase is initiated by the network device creating said topology map.
- 13. (Original) Network device for a wireless network, characterized by means to broadcast a calibration signal, to measure a power level of a received calibration signal, and to transmit its measurement results to another network device or to store it internally.
- 14. (Original) Network device according to claim 13, characterized in that said functions are performed on demand of another network device or on an internal demand.
- 15. (Previously Presented) Network device according to claim 13, characterized by a calibration decoder (9) that initiates the broadcast of a calibration signal and the measurement of the reception quality of one or more incoming calibration signals upon reception of a measurement control signal.
- 16. (Original) Network device according to claim 15, characterized in that said calibration decoder (9) initiates the transmission of one or more measurement results upon reception of a reporting control signal.
- 17. (Previously Presented) Network device according to claim 13, characterized by a report encoder (10) that receives one or more signal quality indication signals and

encodes therefrom a signal quality control signal to be transmitted to said other network device.

18. (Currently Amended) Network device <u>configured and adapted</u> for <u>wireless</u>

<u>communication in</u> a wireless network, characterized by means to initiate a measurement phase, to initiate a reporting phase and to perform a creation of a topology map on basis of measurement results received during the reporting phase.
